Making kids future ready

- **Our mission is to make kids future ready** -

We believe that a combination of technology and creativity is a requisite skill set to unlock the potential of tomorrow. We bring that perspective into our courses at mycodecamp.com. Our curriculum is structured to kindle curiosity in the minds of young children and help them learn technology skills in a fun and interactive way. Our courses are created by some seasoned technologists and delivered through a balanced mix of instructor lead online and offline learning modules.

mycodecamp.com's introductory course "Introduction to programming with MIT Scratch" lays a strong introduction for kids age 7+ to programming using MIT's Scratch - a visual programming language. Children start by building small animations to learn the basic concepts in programming and then move on to build complex games through a series of interactive and self programming sessions. The course starts with a one day intensive bootcamp followed by 6 self learning modules delivered through our online learning platform (learn.mycodecamp.com).
